DETAILED ACTION

Applicant's arguments filed on Jan. 18, 2005 have been fully considered.

Specification

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

The abstract of the disclosure is objected to because it contains more than 150 words.

Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Jain et al. (Jain) (6,312,134) in view of Nakagawa et al. (Nakagawa) (5,528,392).

Jain discloses an apparatus for programmably generating an illumination pattern superimposed onto a substrate, said illumination pattern having a predetermined arrangement of light and dark zones, said apparatus comprising: an illumination source (1); a reconfigurable

mask (3) composed of an array of pixels comprising a digital micromirror device, said pixels being actively controllable and directly addressable by means of a computer-controlled circuit and computer interface, said computer-controlled circuit being operated using a software program providing temporal control of the intensity of illumination emanating from each pixel so as to form the illumination pattern comprising the predetermined arrangement of light and dark zones; and a projection system (4) suitable for imaging the reconfigurable mask onto the substrate (5) by permanently altering a physical chemical property of the substrate surface in accordance with the pattern. Jain also discloses controlling pixels to adjust levels of transmissivity or reflectivity (col. 15). However, Jain does not disclose substrate displaying lowered impedance in illuminated region and upon application of an AC voltage, the electric field in the illuminated region is greater in the illuminated region and imaging and recording the superimposed image of the illumination pattern. Nakagawa discloses in col. 10, lines 52-62, substrate with lowered impedance in the illuminated region and greater electric field in the illuminated region. Nakagawa also discloses controller (53) and display (57) for imaging and recording the pattern. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to provide the substrate of Nakagawa and the controller and display of Nakagawa to the invention of Jain in order to form images whose tone corresponds to the density of the image as taught by Nakagawa in col. 2, lines 39-43.

Remarks

According to preliminary amendment filed on Mar. 16, 2002, claims 2-31 are cancelled, and only claim 1 is pending.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
